ZINKPOWER® IS HOT-DIP GALVANIZING

AN IMPRESSIVE PIECE OF ZINKPOWER

A piece of work continues to touch the soul, even after many years, if you protect your masterpieces from corrosion by hot-dip galvanizing. Being involved in your projects, both large and small, gives us real joy and spurs us on at the same time. Giving our best – is literally a given.

COHESION – THE KEY TO SUCCESS

Experience has shown that the best work has three things in common: a challenging task, an infectious idea and first-class execution.

Project:
Steel construction
Corrosion protection:
Hotdip galvanizing
Execution:
ZINKPOWER® Group

THE TASK

Regardless of whether for manufacturing plants, warehouses, airport terminals or administrative buildings: it's hard to imagine the world of construction without the use of steel as a construction material. When combined with glass or concrete, it permits ambitious construction approaches and provides for a high degree of creative freedom.

THE IDEA

Steel is known for its almost passionate tendency to corrode, at the same time being highly valued for its diverse uses. The ZINKPOWER® Group has set itself the task of reliably protecting steel from corrosion.

THE EXECUTION

During the galvanizing process, steel alloys form a zinc-iron layer when it comes into contact with the hot molten zinc. A number of structural points need to be considered at the design stage to form this indissoluble protective layer, to avoid tension or distortion in the construction and to ensure high quality galvanizing. If the provisions of ASTM385 or DIN EN ISO 14713-2 are adhered to in the construction, then nothing stands in the way of decades-long reliable corrosion protection of the steel. Steel is therefore ideal for the realisation of architecturally challenging and outstanding structures.

Due to hot dip galvanizing, steel will be protected against corrosion for many years. A further positive side effect is the almost negligible cost of maintenance and repair. The ZINKPOWER® Team in Waco is happy to provide advice even at the design stage.

Our combined group makes us strong. As the market leader in corrosion protection, we are in a position to deliver every task, regardless of the complexity, in consistently high quality and with a comprehensive service from every plant worldwide.

ZINKPOWER WACO

LLC

Receiving hours:
Monday – Friday
07:30 am – 04:00 pm

Kettle dimensions:
18.3 x 2.6 x 3.4 m
(60' x 8'5" x 11'2")
[L x W x D]

- Hot-dip galvanizing
- Express-Service
- Consulting during the design and construction phase
- Corrosion protection consulting
- Support with final building inspections
- Custom-made logistic services
- Assembly-ready completion of construction components
- Packaging

STEEL AND METAL STRUCTURES FORM THE BASIS OF YOUR DAILY WORK.
ITS CAREFUL HANDLING AND CORROSION PROTECTION IS OUR TASK!
FAST, RELIABLE, LONG-LASTING.

OUR SERVICES

In our state-of-the-art plant, we galvanize a wide range of components measuring up to 58' x 8' x 10' and component weights of up to 19 tons. Apart from hot-dip galvanizing, ZINKPOWER Waco also offers a range of additional services, such as blasting, painting, professional storage, packaging of hot-dip galvanized materials and educational seminars.

LOCAL | REGIONAL | GLOBAL

Do you need assistance with logistics? We'd be glad to assist with individually tailored logistics concepts.

COMPANY HISTORY

ZINKPOWER Waco opened in May 2021. Our galvanizing kettle in the "Heart of Texas" is one of the largest, longest and deepest in North America.

The responsible treatment of the environment is a significant element of our business philosophy. Stringent internal environmental standards have therefore been developed within the ZINKPOWER® Group that are systematically applied at each site: Our production process is a closed loop system which generates no waste water. Every investment is examined in advance in terms of its energy efficiency and environmental compatibility.

Tested for conformity with
the ZINKPOWER® Group
environmental standards
