GALVANIZING IN MOSONMAGYAROVAR: FAST, RELIABLE AND EFFICIENT.

Company history

In 1993 the Kopf Group took over the galvanizing plant of the farm machinery manufacturer Kühne from the Budapest public receiver. In 1996 it became the first galvanizing plant to achieve DIN EN ISO 9002 quality management certification in Hungary and is the country's only galvanizing factory with DIN EN ISO 14001 environmental management certification. In 2007 it was completely modernised. Its new kettle is one of the biggest in Europe.

Our service

- In our state-of-the-art galvanizing plant we offer the galvanizing of a wide variety of materials with dimensions of up to 15.5 x 1.9 x 3 m.
- Sandblasting and spin galvanizing of small parts at normal temperature or at high temperature with dimensions of 8–750 mm and a piece weight up to 30 kg.
- Production of hot-dip galvanized steel gratings made to measure. Sale of press locked gratings made of stainless steel or aluminium and sale of heavy duty gratings.
- Powder coating of hot-dip galvanized steel with dimensions of up to 7 x 0.5 x 2.4 m and a piece weight of up to 0.3 tons.

Advantage of hot dip galvanizing

In comparison to paint systems hot dip galvanized steel components are more durable and stronger. Reduced consumption of natural resources, lower emissions and a more favourable carbon footprint speak for itself.

Contact us and benefit from competent consultation and short delivery times.

Tested for conformity with the
Kopf Group environmental standards

WE MAKE MORE OF ZINC.

Constructions made of steel and metal are your line of business. Protection and careful handling of the same is our job. At more than 30 locations in Europe, America and Asia we are galvanizing your products – from long or flat steel, structural components to serial products. Fast, reliable, environmentally friendly and with the highest quality.

All companies of our group are certified according to DIN EN ISO 9001. We galvanize according to DIN EN ISO 1461, the German DAST Guidelines 022 and according to the guidelines of the Austrian Steel Association. Highly qualified staff ensure highest quality and constant monitoring of the complete process.

Part of the Kopf Group's philosophy is to safeguard the environment and the responsible use of natural resources. This is why we set our own environmental standards and make sure they are consequently implemented by all our companies. Our production facilities do not produce waste water, special filtering equipment developed by our engineering team is used to clean the air and excess heat is re-used through heat exchangers. The energy consumption and environmental sustainability of each of our investments is checked. As a result of these policies all companies are DIN EN ISO 14001 certified.

Galvanizing with ZinkPower Moson is sustainable, conserves the environment, guarantees highest quality and is highly economical – a way that pays off. Convince yourself !

See green,
think green,
galvanize green.
With Kopf.

THE RESULTS SPEAK FOR THEMSELVES.
