

KETTLE DIMENSIONS AND LOCATIONS

Galvanizing unlimited

Galvanizing unlimited

As part of the Kopf Group, ZINKPOWER is one of the world's leading hot-dip galvanizers. With over 50 companies, including 12 coating centres, we operate in 13 countries across four continents.

In addition to long-lasting corrosion protection, our expertise also extends to safeguarding the flexibility and versatility of our systems: from small parts to steel girders, we can hot-dip galvanize and powder-coat any component across our Group – while maintaining the highest quality standards at all times.

This flexibility ensures we can provide our customers with tailor-made solutions that meet their needs exactly.

Of course, our commitment extends well beyond our technical capabilities. The ongoing integration of economic, environmental and social considerations ensures our long-term viability.

TECHNOLOGY

Our in-house engineering team gives us a technological edge when it comes to sustainability. We are unique in the industry for our use of state of the art filters and exhaust air monitoring systems, which are protected by patents. In many countries we have taken on a pioneering role as the first operator in the industry to introduce quality management systems compliant with DIN EN ISO 9001. DIN EN ISO 14001 is an integral part of our policies for the operation of systems and facilities on every continent and at every location.

EXPERTISE

Quality is a long-standing tradition at the companies of the ZINKPOWER Group, with every stage of the galvanizing process supervised and controlled by experts. Our workforce has a strong sense of personal responsibility and team spirit, actively pursuing their professional development and passing on their knowledge to our apprentices.

CONSULTING

We work with you to develop the best solution for your needs, whether that is selecting the right corrosion protection system or ensuring your design meets the requirements for galvanizing. We discuss the practical arrangements, such as collection and delivery services for your workpieces, and assist you with final building inspections or the assembly of galvanized steel components.

QUALITY

We always strive to use accepted specifications as the basis for our standards and to exceed them wherever possible. For example, at every site our steel is galvanized in a zinc bath whose pure zinc content exceeds the requirements of zinc bath class 1 as set out in DASt Guideline 022 (issued by the German Committee for Steel Construction). In addition, all ZINKPOWER plants in Europe are certified according to DIN EN 1090.

OUR SERVICES FOR YOUR CORROSION PROTECTION

HOT-DIP GALVANIZING

In hot-dip galvanizing, steel is immersed in a zinc bath at approximately 450°C following appropriate pre-treatment. The zinc and steel react with each other, resulting in an iron-zinc alloy forming on the surface of the steel. This indissoluble compound of zinc and steel ensures protection from corrosion.

COATING: POWDER COATING AND COLOUR COATING

Thanks to the coating, which is available in all RAL colors, we offer both excellent long-term protection and the option of custom color designs. In powder coating, workpieces made of steel, hot-dip galvanized steel or aluminium are coated with polyester or a polyester-epoxy powder by means of an electrostatic charge. The powder is baked in at a surface temperature of 180 °C, melting to form a coating. Powder-coated components can be used immediately, as no drying time is required. This method substantially extends the duration of protection, because a conversion layer between the zinc layer and the powder coating provides additional corrosion protection and acts as a bonding agent.

In colour coating, an organic coating material is applied to hot-dip galvanized steel. This is particularly suitable for steel components with complex geometries or high unit weights.

» Our motto right from the start has been 'Galvanizing unlimited'. For us, this means providing our customers with the level of service, quality and reliability that we would expect to receive ourselves. «

Willi Kopf

Being part of a Group enables us to offer a full range of services for larger components at each of our sites.
